Conference on Modernization of Official Statistics

At the regular annual conference of the working group held in Belgrade, Serbia in the period 27-29. June 2022, MONSTAT representatives had the opportunity to be involved in a discussion on innovative practices and identifying future areas of work in official statistics. Special attention this year was devoted to the further development and improvement of existing models: Generic Model of Statistical Business Processes (GSBPM), Generic Statistical Information Model (GSIM), as well as Generic Model of Activities for Statistical Organizations (GAMSO), which represent the foundation of the modernization vision based on standards. In addition, various architectures and models have been developed to complement or support these models, such as the Common Statistical Data Architecture (CSDA) and the Logical Information Model (LIM).

The High Level Working Group on the Modernization of Official Statistics is a group of dedicated statisticians who actively manage the modernization of statistical organizations. Their mission is to work together to identify trends, threats and opportunities in the modernization of statistical organizations. This working group provides a collaborative platform for statistical experts to develop strategies and find solutions in a flexible and agile way. Its main goal is to oversee the development of frameworks and the exchange of information, tools and methods that support the modernization of statistical organizations. The goal is to improve the efficiency of statistical production processes and the ability to produce results that meet the needs of all users.
