METHODOLOGICAL NOTES

The methodology by which the indices of producer prices for export are calculated is in line with the methodology for calculating the producer price indices of industrial products for domestic market and it is based on principles and recommendations of international statistics. The aim of this survey is to calculate the overall index of producer prices of industrial products (for domestic and foreign markets) and it is also used as a short-term indicator in macroeconomic analysis and views. This survey is conducted on a representative sample.

This survey includes companies classified in the sections of mining and quarrying and manufacturing of the NACE Rev. 2 classification, with more than five employees that meet the unit of measurement prescribed by the Nomenclature of industrial products per unit of product. It also includes companies classified in other sections of the NACE Rev. 2 classification, which are composed of industrial drives or other organizational forms that are engaged in industrial production. Sample and weights are based on annual industrial survey and foreign trade survey. The most important products from each area are selected for price monitoring, i.e. products with the highest realization on the foreign market, and the selection of producers were made according to their participation in the production of individual products.

Data are published according [Statistical Release Calendar](#).

The last published data are considered **preliminary**, and becomes final within the defined deadline, as foreseen by the Statistical Release Calendar.

Special aggregates:

Energy – Includes activities of extraction, production, processing and distribution of energy.

Intermediate goods – Include products that are final product of manufacturing process, but can also be used as an input to other production processes.

Capital goods – Include heavy equipment which require relatively large investments, and are purchased for use over a long period of time.

Non-durable consumer goods – Include products for mass consumption, purchased by consumers for daily or frequent use.

Since January 2018, the index reference period for the calculation of Producer price index of industrial products for export is 2015=100. This methodological change is at the same time a request from Eurostat, and it refers to all short-term statistics.
