Annual release on consumption of building material, electricity and gas for 2013

The annual release on the consumption of building material, electricity, and gas covers material and energy resources used by all contractors (construction and non-construction enterprises) for construction of objects, maintenance, repair and operation of machinery and motor pool, heating, as well as for stationery and other supplies.

The value of building material spent in 2013 is EUR 56 748 000, representing the decrease of 9.5% compared with 2012

METHODOLOGICAL EXPLANATIONS

Data source and coverage

The annual release on the consumption of building material, electricity, and gas covers all enterprises classified under the construction activity within Sector F - Construction, as well as enterprises not classified by this sector, but possessing units in their composition which perform works on construction buildings (newly built dwellings, reconstruction, adaptation, modernisation, large repairs and regular maintenance), regardless if the works are performed by themselves or through the subcontractors.

Definitions

The consumption of building material and fuel is presented for the total construction enterprise submitting the report, including also the consumption of electricity and material for heating for joint services. Non-construction enterprises report the consumption of building material only for business units, as well as the consumption of fuel and other material for their needs.

The type of material is presented based on the records kept by material accounting, regardless if the reporting unit purchased or produced the material by itself.
