

Industrial Production 2010

The production of major industrial products in Montenegro in 2010 can be presented in different manners. As major industrial products we consider products classified by the activity classification with the highest share in the total industrial production.

In 2010 the following products indicated the growth of production compared to the production from 2009: lignite with the increase from 957 164 t to 1 937 847 t, i.e. 104.4%; electricity from 2 759 751 MWh to 4 169 009 MWh, i.e. 51.1%; and steel ingots with 13 817 t to 33178 t, i.e. 140.1%.

In 2010 the production of following products decreased compared to the production from 2009: heavy, light steel and light steel bars indicated the fall from 82 725 t to 33 178 t, i.e. 67.4%, beer from 456 896 hl to 423 799 hl, i.e. 7.3%, and wheat flour from 38 065 t to 31 408 t, i.e. 17.5%.

METHODOLOGICAL EXPLANATIONS

The annual survey IND-21 collects the following data on industrial production: quantities of stocks at the beginning of year, production done (within it, the data on produced quantities and separately on service produced quantities are presented), quantity spent for further processing, quantity of stocks at the end of year, quantity and value of product purchase. Purchase, consumption, and stocks of energy and fuel for the fuel and technological purposes are monitored by a separate sub-list.

A **reporting approach** is applied - every reporting unit composes a report in the form (questionnaire) IND-21. Reporting units submit the annual report on industry for previous year to the responsible regional unit not later than 20 April of current year. The data sources are book-keeping, warehouse, and other records, and files kept by reporting unit.

The reporting unit is obliged to deliver the questionnaire IND-21 filled to the responsible statistical body, not later than 20 April of current year for the previous one. The deadline for the first results of the IND-21 processing done by Statistical Office is 30 October of current year.
