

## POLJOPRIVREDA

Podaci o opštem pregledu razvoja poljoprivrede prikupljeni su kompleksnim godišnjim izvještajem za koje su metodološka objašnjenja data u odgovarajućim poglavljima ovog Godišnjaka.

### Biljna proizvodnja

#### Izvori i metodi prikupljanja podataka

Redovnim godišnjim izvještajima poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga) prikupljaju se podaci o površinama, voćnim stablima, čokotima vinove loze, proizvodnji i domaćoj preradi, a podaci se baziraju na knjigovodstvenoj i drugoj evidenciji ovih organizacija.

Za privatna poljoprivredna gazdinstva podaci za površine su procjene zasnovane na podacima sveobuhvatnog katastra. Tako se podaci o površinama, voćnim stablima, čokotima vinove loze, proizvodnji i domaćoj preradi na privatnim gazdinstvima dobijaju procjenom.

Do 1961. godine procjene su vršile posebne opštinske komisije u čiji sastav su ulazili pored predstavnika opštine i poljoprivredni stručnjaci i sami poljoprivrednici. Od 1962. procjenu obavljaju procjenitelji. Na području Crne Gore procjenu vrši 65 procjenitelja, a teritorija je podijeljena na 195 procjebenih područja. Za statističke procjenitelje se uzimaju poljoprivredni stručnjaci ili dobri poznavaoči lokalnih prilika, koji su za tu svrhu obučeni i sa kojima statistički organi održavaju stalne kontakte. Statistički procjenitelji se prilikom procjenjivanja oslanjaju na najnovije podatke katastra, na procjene iz prethodnih godina, na prikupljene informacije od poljoprivrednih proizvođača i stručnjaka, na svoja lična zapažanja i na druge izvore.

Sprovođenjem Popisa poljoprivrede u 2010. godini, stvoreni su uslovi za početak usklađivanja statistike biljne proizvodnje sa Eurostatovim preporukama.

Dosadašnji metod procjene zamijenit će se istraživanjima koja će biti direktno vezana za gazdinstva (metod uzorka).

Krajem 2012. godine započeo je rad na izradi nove metodologije i obrazaca. Ove promjene imaće značajne posledice na vremenske serije, čije će se preračunavanje vršiti u narednoj godini. U narednom izdanju Godišnjaka planirano je objavljivanje preračunatih vremenskih serija na bazi podataka iz popisa poljoprivrede 2010.

Potrošnja vještačkih đubriva izračunata je na bazi podataka redovnih izvještaja poljoprivrednih gazdinstava, i poljoprivrednih anketa koje se sprovode od 1956. godine.

Godišnjim izvještajima poljoprivrednih preduzeća i zemljoradničkih zadruga prikupljeni su podaci o poljoprivrednim oruđima i mašinama, potrošnji elektroenergije, maziva i sredstava za zaštitu bilja.

#### Obuhvat

Podacima statistike biljne proizvodnje obuhvataju se svi fondovi i proizvodnja poljoprivrednih preduzeća i zemljoradničkih zadruga koje se bave biljnom proizvodnjom. Ove jedinice dostavljaju i izvještaje za dio proizvodnje privatnih gazdinstava, koja se ostvaruju u kooperaciji sa tim preduzećima.

Za privatna poljoprivredna gazdinstva podacima se obuhvataju cjelokupne površine i prinosi, kao i površine i prinosi van poljoprivrednih gazdinstava (domaćinstva nepoljoprivrednika, bašte u gradovima i sl.).

#### Definicije

*Poljoprivredne površine* su zemljišne površine koje se koriste za poljoprivrednu proizvodnju. Čine je: obradive površine, pašnjaci, ribnjaci, trstici i bare.

*Obradive površine* se podrazumijevaju zemljišne površine na kojima se gaje ratarski i povrtlarski usjevi, višegodišnji zasadi trave, i na kojima se vrše obrada, kosidba i drugi poljoprivredni radovi i, po pravilu, ubiraju prinosi svake godine. Čine je: oranice i bašte, voćnjaci, vinogradi i livade.

*Oranične površine (njive)* su zemljišne površine na kojima se obavlja ratarska proizvodnja. Na njima se po utvrđenom redu (plodoredu) siju ratarski usjevi: žita, industrijsko bilje, povrtno i krmno bilje. U oraničnu površinu se uračunavaju i površine koje su «radi odmora» ostale neobrađene: zeleni ugar ili crni ugar, zaležaji, parlozi i prelozi. Oranicama se smatraju i površine pod voćnim i lozним rasadnicima, kao i djetelišta i lucerišta.

## AGRICULTURE

Data on general review of agricultural development are collected through complex annual reports. Methodological explanations are given in the corresponding chapters of the Yearbook.

### Crop Production

#### Sources and methods of data collection

Regular annual reports of agricultural organizations (agricultural enterprises and cooperatives/collective farms) provide data on area, fruits, vine, production and processing, and these data are based on bookkeeping and other records.

For private agricultural holdings, data on areas are *estimates* based on data taken from comprehensive cadastral records. Therefore, data on area, fruits, vine, production and processing on private farms are obtained by estimates.

Until 1961, estimates had been made by special municipal commissions comprised of a representative of municipality in addition to agricultural expert and farmers themselves. As of 1962, the estimation is made by estimators. A group of 65 statistical estimators has been set up to cover 195 estimation areas within Montenegro. Agricultural experts, who are quite familiar with local conditions and trained for these tasks, are engaged as *statistical estimators*. They have regular contacts with statistical office, and their work is based on the latest cadastral data, estimates from preceding years, data of private agricultural holdings and experts, as well as their own observations and other sources.

Conducting the Census of Agriculture in 2010 created the conditions to start the harmonisation of crop production statistics with Eurostat recommendations.

Previously used estimation method will be replaced with the surveys directly connected to the holdings (sample method).

At the end of 2012, the work on producing new methodology and forms started. These changes will have important effects on the time series which will be recalculated in the next year. There is a plan to publish the time series recalculated on the basis of the 2010 Agriculture Census data within the next issue of Statistical Yearbook.

Consumption of fertilizers is calculated from data of regular reports of agricultural holdings and agricultural surveys that have been conducted since 1956.

Annual reports of agricultural enterprises and collective farms provide data about agricultural tools and machinery, consumption of electricity, grease and pesticides.

#### Coverage

Statistical data on crop production cover funds and production of agricultural enterprises and cooperatives/collective farms involved in crop production. These responding units are also providing data on a part of private agricultural production, realized in cooperation with them.

As far as private agricultural holdings are concerned, the corresponding data cover total area and yields, as well as area and yields out of agricultural holdings (non-agricultural households, town gardens and similar).

#### Definitions

*Agricultural areas* are land areas used for agricultural production. Agricultural area includes cultivable areas, pastures, fishponds, reeds and pools.

*Cultivable area* covers land areas where farm crops, vegetable crops, perennial plantings and grass are grown; cultivation, mowing and other agricultural works performed and yields gathered every year. Cultivable area consists of arable land and gardens, orchards, vineyards and meadows.

*Arable land (fields)* refers to land areas solely intended for field crop production. These areas are sown with the following crops, in rotation: cereals, industrial crops, vegetable crops and fodder crops. In addition, arable area includes „recovering areas” that remained uncultivated: green fallow or black fallow, neglected land and similar. In addition, arable lands are also areas under vine and fruit nurseries and areas under clover and Lucerne (alfalfa).

*Rodnim stablima voća i čokota loze* se smatraju stabla-čokoti, koji su prema svojoj fiziološkoj zrelosti sposobna da pod normalnim uslovima za vegetaciju zametnu plod, bez obzira da li su u odnosnoj godini rodila ili ne.

*Prinos usjeva* je iskazan kao ambarski prinos normalne vlažnosti, po odbitku svih gubitaka prilikom žetve (berbe), transporta i vršidbe.

*Prinos po jedinici površine* ( po ha ) obračunat je na požnjevenu površinu.

*Prinos po stablu-čokotu* obračunava se na rodna stabla, odnosno, na čokote vinove loze ili hibride.

Vinom se smatra proizvod dobijen alkoholnim vrenjem šire ili kljuka od svježeg grožđa plemenite vinove loze ili hibrida.

*Pod mekom rakijom* podrazumijeva se rakija jačine do 30 vol. % alkohola (do 12 gradi), a pod *ljutom rakijom* – rakija jačine preko 30 vol. % alkohola (preko 12 gradi).

## Stočarstvo

### Izvori i metodi prikupljanja podataka

Redovnim godišnjim izvještajima poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga) prikupljaju se podaci o broju i bilansu stoke, kao i podaci o proizvodnji mlijeka, jaja, vune i meda. Podaci za privatna poljoprivredna gazdinstva i domaćinstva prikupljaju se godišnjom anketom, koja je od 1961 - 1964. godine bila organizovana na principu prostog slučajnog uzorka, da bi od 1965. bio primijenjen dvoetafni uzorak. Broj anketiranih individualnih poljoprivrednih gazdinstava obuhvaćenih anketom iznosio je 15%. Uzorak za anketu o broju stoke sa stanjem 15. januar svake godine, sprovodi se od 1956. godine. Ovom anketom dobijeni su podaci i o obrtu stada.

Godine 1993. primijenjen je dvoetafni stratifikovani uzorak bez ponavljanja kojim je bilo obuhvaćeno preko 5070 privatnih poljoprivrednih gazdinstava i domaćinstava. Isti je korišćen za 13 redovnih statističkih istraživanja Ankete o broju stoke u domaćinstvima. U 2004. god. ažurirana je baza podataka na osnovu koje je izvršen izbor novog uzorka, primijenjen je dvoetafni stratifikovani uzorak bez ponavljanja sa popisnim krugovima kao primarnim i domaćinstvima kao sekundarnim jedinicama. Uzorkom je obuhvaćeno preko 4 940 privatnih poljoprivrednih domaćinstava. Isti uzorak je korišćen za anketu o broju stoke u domaćinstvima sa stanjem 15. 1. 2005., 15. 1. 2006. i 15. 1. 2007. godine. Ankete o broju stoke zasnovane na novom uzorku su dale različite rezultate u odnosu na predhodnu anketu zasnovanu na starom okviru. Postojali su opravdani razlozi da se sumnja u kvalitet rezultata i u jednom i u drugom slučaju i primijenjena je jedna od modernih statističkih metoda koja se koristi u savremenoj statistici a to je kontrola kvaliteta. Uporedo sa anketom zasnovanom na novom uzorku izvedena je Pilot studija 2005 godine „Ocjena kvaliteta okvira za anketu o poljoprivrednim gazdinstvima“. Pilot studijom izvršena je ocjena kvaliteta okvira a takođe dobijeni su i korekcionni faktori koji su primijenjeni za korekciju rezultata Ankete o broju stoke u poljoprivrednim gazdinstvima, čime je ispravljena nedovoljna pokrivenost okvira. Zbog velike razlike u brojnom stanju stoke, naročito kod pojedinih vrsta stoke (npr. goveda) nije se mogla primijeniti metoda vremenskog sravnjenja serije što je uslovalo potpuno novi početak za statistiku stočarstva.

Takođe, primijenjeni koeficijenti koji su ispravili nedovoljnu pokrivenost u okviru zbog veličine uzorka za Pilot studiju mogu se primijeniti isključivo za nivo države, a ne i za nivo Opština.

U junu 2010. godine sproveden je Popis poljoprivrede, prvi u Crnoj Gori poslije 50 godina. U 2011. god. ažurirana je baza podataka na osnovu koje je izvršen izbor novog uzorka, primijenjen je dvoetafni stratifikovani uzorak bez ponavljanja sa popisnim krugovima kao primarnim i gazdinstvima kao sekundarnim jedinicama. Uzorkom je obuhvaćeno preko 5 130 privatnih poljoprivrednih gazdinstava. Uzorak je korišćen za anketu o stoci za 2011. godinu i prvi put je poslije 56 godina promijenjen referentni period sa 15. januara na stanje 1. decembra u cilju harmonizacije sa standardima EU. Takođe, samim tim što je promijenjen okvir za izbor uzorka, umjesto baze podataka iz Popisa stanovništva stanova i domaćinstava ažurirana je baza podataka iz Popisa poljoprivrede, doslo je do promjena u klasifikaciji, statističkoj metodologiji, statističkoj populaciji i konceptima što je uslovalo jednokratni prekid vremenske serije. Planiran je rad na vremenskom sravnjenju serija.

*Productive fruit-trees and grapevines* are fruit-trees and grapevines capable by their physiological maturity to grow a fruit under normal vegetative conditions, regardless of whether they bore fruits during the reference year.

*Yield of crops* is shown as the granary yield of normal humidity after deduction of all losses/damages during a harvest (gathering), transportation and threshing.

Calculation of a *yield per area* unit (per hectare) is based on the harvested area.

Calculation of a *yield per fruit tree - grapevine* is based on productive fruit or grapevines.

*Wine* relates to a product obtained by alcoholic fermentation of a must or crushed grapes of pure vines or hybrids.

*Weak brandy* is a brandy up to 30 vol.% of alcohol (up to 12 grades), and *strong brandy* is a brandy over 30 vol.% of alcohol (over 12 grades).

## Livestock breeding

### Sources and methods of data collection

Data on number of livestock and livestock turnover, as well as data on production of milk, eggs, honey and wool are collected through regular annual reports of agricultural organizations (enterprises and collective farms) and annual surveys on private agricultural holdings and households. From 1961 to 1964, it had been organized by a principle of simple random sample, and as of 1965, a two-stage sample was introduced. Since 1968, 15 percent of agricultural holdings were covered by the survey. As of 1956, a livestock sample survey was carried out every year, on January 15th. The survey was also providing data about livestock turnover.

In 1993, a two-stage stratified simple random sample with no repetition was used covering 5070 private agricultural holdings and households. The same sample was used for 13 regular Livestock surveys in households. In 2004, the database was updated as the frame of a new sample, and two-stage stratified sample with no repetition has been introduced with enumeration areas as primary, and households as secondary units. The sample covers over 4940 private agricultural holdings. The same sample was used for Livestock survey as on 15.01.2005, 15.01.2006. and 15. 01. 2007. Livestock surveys based on new sample gave different results compared to the previous survey based on the old frame. There were justifying reasons to suspect in the quality of results in both cases, therefore quality control, one of modern statistical methods used in modern statistics, was applied. Parallel with the survey based on new sample, the Pilot study 2005 "Quality assessment of frame for Survey on agricultural holdings" was done. Pilot study did the assessment of quality of frame and gave correction factors applied for the correction of the results of the Livestock survey in agricultural holdings, which corrected the under-coverage of the frame. Due to the considerable difference in be livestock balance, especially in certain types of livestock (i.e. cattle) the method of harmonization of time series could not be done that influenced the completely new start in livestock statistics.

Additionally, the applied coefficients corrected the under-coverage in the frame and due to size of the sample for the Pilot study; they could be applied to the state level only and not to the municipality level.

In June 2010 the Census of Agriculture was conducted, the first one in Montenegro after 50 years. In 2011, the database was updated on the basis of which the selection of new sample was done; two-phase stratified sample was done without repetitions with enumeration areas as primary and holdings as secondary units. The sample covered over 5 130 family agricultural holdings. The sample was used for the survey on livestock for 2011, and for the first time after 56 years the reference period was changed from 15 January to 1 December situation aimed at the harmonization with the EU standards. Also, the in addition to the changed frame for the selection of sample, instead of the database from the Census of Population, Dwellings and Households, there was updated the database from the Census of Agriculture, changes in classification, statistical methodology, statistical population and concepts causing the one-off interruption of time series. There is plan to work on time series adjustment.

Podaci o proizvodnji prirasta žive stoke i proizvodnji mesa obračunati su na osnovu raspoloživih podataka o bilansima stoke Ankete o stoci, godišnjeg izvještaja o stočarstvu poljoprivrednih organizacija i podataka o klanju stoke na klanicama.

Podaci o veterinarskim radnicima i objektima preuzeti su od Veterinarske uprave i Agencije za lijekove i medicinska sredstva Crne Gore.

### Obuhvat

Podaci o broju i bilansima stoke obuhvataju stočni fond u poljoprivrednim preduzećima i zemljoradničkim zadrugama, privatnim poljoprivrednim gazdinstvima i nepoljoprivrednim domaćinstvima.

### Definicije

*Bilans stoke* predstavlja obrt stada tokom godine u kome se registruju promjene u brojnom stanju stoke.

*Prirast stoke* predstavlja proizvodnju žive mjere stoke tokom godine, kao rezultat priploda, porasta i gojenja stoke. Čini ga:

- razlika težine žive stoke na kraju i na početku godine;
- razlika težine prodate i kupljene stoke;
- živa težina zaklane stoke na gazdinstvima.

*Bruto težina* stoke predstavlja težinu životinja neposredno pred klanje.

*Neto težina* stoke predstavlja težinu zaklanih životinja poslije otklanjanja određenih dijelova u zavisnosti od vrste i kategorije stoke, tj. težinu očišćene zaklane životinje.

## Ribarstvo

### Izvori i metodi prikupljanja podataka

Osnovni cilj statistike ribarstva je prikupljanje podataka o ulovu morske i slatkovodne ribe. Pored ovog zadatka ove statistike je da prikupi podatke o: zaposlenom osoblju, o ribarskim objektima, o plovnim sredstvima, ribarskoj opremi, proizvodnji i ulovu ribe, proizvodnji ikre i mlađi i potrošnji hrane u ribnjacima.

Jedinice posmatranja u statistici ribarstva su: preduzeća za proizvodnju, ulov, promet i preradu ribe, ribarske zadruge, ostale privredne organizacije koje se bave ulovom i proizvodnjom ribe, Institut za biologiju mora, individualni ribari koji se bave ulovom za sopstvenu potrošnju ili prodaju i udruženja za sportski ribolov (bez obzira gdje se vrši ulov).

Podaci o slatkovodnom i morskom ribarstvu prikupljaju se izvještajnom metodom i metodom procjena.

### Obuhvat

Podaci o morskom i slatkovodnom ribarstvu koji se prikupljaju izvještajnom metodom, a popunjavaju se iz knjigovodstvene evidencije preduzeća i zadruga, koje se bave ribolovom kao osnovnom ili sporednom djelatnošću, po pravilu se obuhvataju u potpunosti.

Međutim podaci koji se obezbjeđuju metodom procjena (ulov ribe privatnih ribara), zbog nepostojanja adekvatne ili nikakve evidencije, često se ne obuhvataju u potpunosti, naročito kada se radi o detaljima određene pojave i nižim nivoima.

### Definicije

*Privredni ribolov* je djelatnost ulova ribe i drugih živih organizama slatkih i slanih voda zbog sticanja dobiti.

*Brod* je svaki plovni objekat koji ima palubu i zapreminu veću od 28,32 m<sup>3</sup> (10 BRT). Pod *čamcem* se podrazumijeva svaki plovni objekat sa manje od 10 BRT.

Livestock increase and meat production data have been calculated on the basis of livestock balance data from the Survey on livestock, annual report on livestock breeding of agricultural organizations and data on slaughtering in abattoirs.

The data on the veterinary workers are obtained from Veterinary Administration and Agency for Medicines and Medical Devices of Montenegro.

### Coverage

Data on the number and balances of livestock cover livestock of agricultural enterprises, agricultural co-operatives, private agricultural holdings and non-agricultural households.

### Definitions

The *livestock balance* represents changes in number of livestock during reference year.

*Livestock increase* represents livestock live-weight breeding production, livestock growing and fattening, throughout the year. It includes:

- livestock weight difference at the end and beginning of year
- weight difference between sold and purchased livestock
- live weight of slaughtered livestock in holdings.

*Gross-weight of livestock* is the weight of live animal just before slaughtering.

*Net-weight* of livestock is the weight of slaughtered animal after removal of certain parts, depending of livestock type and category, i.e. the weight of slaughtered and dressed animal.

## Fishing

### Sources and methods of data collection

Primary objective of fishery statistics is data collection about the catch of sea and freshwater fish. Apart from that, the task of this statistics is also to collect data about employed persons, fishing objects, vessels, fishery equipment, production and catch of fish, production of spawn and progeny and consumption of food in fishponds.

Units to be observed in fishery statistics are: enterprises for production, fishing, selling and manufacture of fish, fishery cooperatives, other economic organizations involved in fishery, Institute for Biology of the Sea, individual fishers catching fish for their own consumption or sale, and sport fishery associations (no matter where the fishing takes place).

Data on sea and freshwater fishing are obtained by reporting method and method of estimation.

### Coverage

Data on sea and freshwater fishing, collected by reporting method and filled in from bookkeeping evidence of enterprises and co-operatives dealing with fishing as primary or secondary activity, are, as a rule, covered entirely.

However, data obtained by method of estimation (catches of the private fishers) are not covered entirely due to inadequate or missing evidence, especially about details of a certain category and lower levels.

### Definitions

*Economic fishing* is an activity of fish catches and other live animals in freshwater and seawaters, for economic purposes.

*Ship* is any sailing object, having a board and over 28.32 m<sup>3</sup> (10 GRT). *Boat* is any sailing object of less than 10 GRT.

<sup>1)</sup> Vidjeti metodološko objašnjenje na strani 87.

<sup>2)</sup> Požnjevena površina i prinos po hektaru iskazani su samo za čist usjev, a ukupan prinos za čist usjev i međusjev zajedno.

<sup>1)</sup> Look at the methodological explanation on page 87

<sup>2)</sup> Harvested area and yield per hectare refer only to pure crop, while total yields refer to pure and interplanted crops together
