

Persons with Health Problems in the Labour Market ***Labour Force survey, Montenegro 4th quarter 2012***

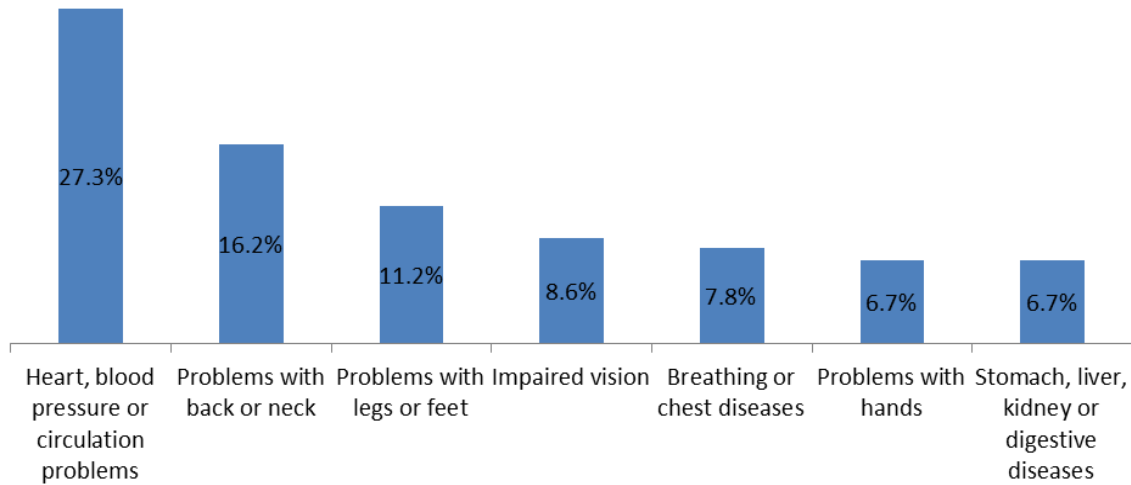

In the fourth quarter of 2012 we added some additional questions to the Labour Force Survey in order to get information on the people with health problems in the labour market in last 12 months. The answers were collected on the basis of statement of persons, regardless of the existence of medical documentation as the proof of health problems. We collected data for persons from 15 to 64 years old. It was possible to answer this question with several options, because a person can have more than one type of health problem.

Chart 1. How many population aged 15 to 64 years have health problems in the Labour Market?

- *65.3 thousands or 15,5% of the total population from 15 to 64 years old (421.8 thousands) have health problems in last 12 months.*

- 11% population with health problem are unemployed persons.

METODOLOŠKA OBJAŠNJENJA

In the Labour Force Survey, the population aged 15 and above is viewed according to the activity in the reference quarter and not according to the formal status of surveyed persons.

Employee in the survey refer to persons who in the reference week:

- *performed any kind of regular or usual work for wage/profit (in cash, goods or services) at least one hour or any kind of unpaid work (in enterprise, professional practice or agricultural farm in possession of any member of his/her family), or*
- *has not worked (due to illness, vacation, state or religious holiday, education, training, maternity leave, reduced production and other temporary inability to work), but he/she has a job to which he/she will return.*

Unemployed refers to persons who:

- *in the reference week did not worked, not in paid employment or self-employment and did not do any paid work*
- *in the past four weeks were actively seeking work*
- *were currently available for work within two weeks.*

Active population is any employed or unemployed person aged 15 years and over.

Inactive population is any person aged 15 years and over not classified in active population.

Persons with Health Problems in the Labour Market

In the forth quarter of 2012 we added some additional questions to the Labour Force Survey in order to get information on the people with health problems in the labour market in last 12 months.

The answers were collected on the basis of statement of persons, regardless of the existence of medical documentation as the proof of health problems. We collected data for persons from 15 to 64 years old.

It was possible to answer this question with several options, because a person can have more than one type of health problem. Then the person should set to allocate a health problem that mostly affects his ability to work.
