## METHODOLOGICAL EXPLANATIONS

### Source of data and coverage

These releases present the data collected through Annual survey on construction works and Annual survey of buildings constructed by individual owners.

Annual survey on construction works are realised on a sample basis. The frame for a sample is enterprises with 5 and more employees who are in a statistical business register according to the Classification of activities classified in sector F – Construction, as well as companies (KAU), whose business units engaged in construction works. Data are collected on a random stratified sample and stratification is done by the class of employees. Survey covers all large and medium enterprises (class 2 and 3), while small enterprises (class 1) is selected by random simple sample.

Annual survey of buildings constructed by individual owners is realised by poll method. Reporting units are buildings that owners constructed their own labour force, with the help of hired labour or by hiring independent private entrepreneur and craftsmen. The survey on buildings built by individual owners include all buildings, new buildings and extensions, regardless of whether the competent authority has issued a permit for construction, namely: buildings with apartments (exclusively residential, predominantly residential and non-residential predominantly) and buildings without dwellings, but they are built to perform activities of catering, trade, crafts and agriculture. Apart from these, including the garage and if they are built as separate structures, as well as a weekend home. This report shall include the flats that were built by adapting non-residential space.

### Definitions

Value of finalised construction works covers all used building material and workloads whether they are paid or not. Data on value of construction works done relate to works performed during reference year on finished and unfinished constructions.

Value of works performed by contractors – legal entities are given on the basis of annual compilations, while the value of works performed by individuals is based on available documentation or estimation.

Works performed on constructions are shown according to the construction sites and not by the contractor's main office.

Dwelling is any residential construction unit intended for habitation, consisting of one or more rooms with necessary auxiliary spaces (such as: kitchen, bathroom, lobby, pantry, toilet, etc.) or without auxiliary spaces and with one or more separate entries.

Floor area is useful floor area of dwelling, measured by the inner walls of dwelling.

According to the Revision policy of the Statistical Office, the final data shall be published with the date defined by the Statistical Release Calendar.

#### Explanation of symbols:

**CV**: Coefficient of variation

. not zero but extremely inaccurate estimation ( $CV \geq 0,3$ )

( ) less accurate estimation ( $0,1 \leq CV < 0,3$ )

- no data
