	2017	2018	2019
TOTAL	373	486	448
Dwellings under construction by business companies	39	119	60
Dwellings under construction in the household sector	334	367	388

METHODOLOGICAL EXPLANATIONS

These releases present the data collected through survey on construction works and survey of buildings constructed by individual owners.

Survey on construction works are realised on a sample basis. The frame for a sample is enterprises with 5 and more employees who are in a statistical business register according to the Classification of activities classified in sector F – Construction, as well as companies (KAU), whose business units engaged in construction works. Survey covers all large and medium enterprises (class 2 and 3), while small enterprises (class 1) is selected by random simple sample.

Survey of buildings constructed by individual owners is realised by poll method. Reporting units are buildings that owners constructed their own labour force, with the help of hired labour or by hiring independent private entrepreneur and craftsmen. The survey on buildings built by individual owners include all buildings, new buildings and extensions, regardless of whether the competent authority has issued a permit for construction, namely: buildings with dwellings (exclusively residential, predominantly residential and non-residential predominantly) and buildings without dwellings, but they are built to perform activities of catering, trade, crafts and agriculture. Apart from these, including the garage and if they are built as separate structures, weekend home as well as the dwellings that were built by adapting non-residential space.

Value of finalised construction works covers all used building material and workloads whether they are paid or not. Data on value of construction works done relate to works performed during reference year on finished and unfinished constructions.

Dwelling is any residential construction unit intended for habitation, consisting of one or more rooms with necessary auxiliary spaces (such as: kitchen, bathroom, lobby, pantry, toilet, etc.) or without auxiliary spaces and with one or more separate entries.

Floor area is useful floor area of dwelling, measured by the inner walls of dwelling.

Data are published according [Statistical Release Calendar](#).

The last published data are considered preliminary, and becomes final within the defined deadline, as foreseen by the Statistical Release Calendar.

Explanation of symbols:

CV: Coefficient of variation

. not zero but extremely inaccurate estimation ($CV \geq 0,3$)

() less accurate estimation ($0,1 \leq CV < 0,3$)

- no data
